

# School and OSHC

## Environmental Workshops

### **Workshop 1 – Recycling and Sustainability –with The Energy Auditors.**

#### **Section 1- 40 minute show/presentation for all the children**

Showtime Stars are ‘The Energy Auditors’ and it is their job to come to your classes and test your school and children to see if you are looking after the planet. Bringing along their trusty folder full of sustainable ideas they will assess the children’s knowledge of climate change and educate them on better practices they can follow every day.

Using a large projection screen and science experiments the auditors will demonstrate just how harmful CO<sub>2</sub> is to the environment and how the excess levels dramatically increase the temperature of our world.

Using a large image of a footprint a teacher’s carbon footprint will be analysed using different colours for the many different ways our lifestyles effect the climate. You will be surprised by just how big your footprint actually is.

So how do we stop this from happening? The Energy Auditors call upon the children to use their 3 R’s daily and to think about how their actions will affect their future.

A very informative, educational and fun workshop with a large projection screen to visually show what is happening to our planet.

#### **Section 2 – 10 minutes - A Recycling Bin Race Game for all Children**

The children will be divided into groups of approximately 8 children and race against each other to be the fastest to identify the correct bin for items from our pile of rubbish. Pictures of six main groups will be posted around the room and the children will not only need to be quick but astute. Fun and gets the kids moving and thinking.

#### **Section 3 – 30 minutes – Recycling Bingo for all children**

The children will stay in their smaller groups and be given a large bingo sheet with lots of pictures relating to the 5 categories of recycling.

As each card is pulled out of the main bingo bowl that item will be discussed in relation to its recycling aspect. This game will keep children thinking, learning and looking.

#### **Section 4 – 30 minutes Creative Art Renewable Energy Project**

We bring a large collection of recyclables, and leftover materials for the children to use to make sustainable art pieces to keep. Using only the materials at hand the children will have to get very creative. Taking their pieces with them will help the children to be more aware of their rubbish and new ways to re-use materials.

**At the end of all activities we will have a 10 minute recap of the day and the children will give their voice to develop an “ACTION PLAN” for them to implement for their future.**

**REUSE  
REDUCE  
RECYCLE**
